

Participants needed to help us advance AI models for smart human sensing

Human Digital Twin Intelligence: Integrating Multimodal AI and Generative Models for Non-Intrusive Health and Activity Monitoring

The study involves wearing smart wearable devices to record body movements and vital signs while performing a set of physical activities.

The data collected will be used to develop multimodal AI for human activity and vital sign analysis and understanding.

Gift voucher for your participation

When: Flexible dates/times

Duration: 1 hour

Location:

AUT WZ Leve 1 Lab
